

How to: Test Your Video Conference Equipment Using Gemini's

Prior to connecting to a video conference at Gemini, it is very strongly encouraged that you test your ability to connect to our system. To facilitate this, we have an unattended automated method to test the connection ability. All you have to do is call the Gemini Conference Test system using the instructions below and make sure you can see yourself as well as hear your own echo.

To connect to any Gemini video conference systems, you need to connect using H.323 extension number **2222** (sometimes called E.164 extension). Most video conference systems have a box to enter the extension. If not, there are a couple of different formatting standards:

- IPAddress##ext (128.171.188.250##2222)
- IPAddress,,ext (128.171.188.250,,2222)
- ext@IPAddress (2222@128.171.188.250)

*Look for this...
"You Connected
successfully"*
